

Type of product: TRMS digital ammeters with flexible sensors
Product names: MA400D & MA4000D

DigiFLEX: New current testers that fit anywhere!

Any electrician working on electrical cabinets has already had to deal with space constraints.

Chauvin Arnoux's solution: DigiFLEX TRMS ammeters. Their flexible sensors connected to the compact housing fit easily into any cabinet for applications up to **600 V CAT IV**.

These stand-alone instruments are equipped with a **4,000-count digital display for direct current readings**. Particularly simple to set up thanks to the sensor locking system, DigiFLEX ammeters also benefit from the magnetized Multifix mounting system allowing them to be installed anywhere. In addition, a strap is provided so that the DigiFLEX can be stowed tidily.

Despite its high performance, the DigiFLEX remains very simple to use. Just two buttons are all you need to activate or deactivate the automatic power-off function, HOLD the display or the maximum value measured (MAX HOLD).

Two models available with several clamping diameters

The DigiFLEX MA400D has a measurement range starting at just 20 mA. They are ideal for work in residential conditions and can also be used to check electricity distribution points up to 400 A. Two DigiFLEX MA400D models are available with a clamping diameter of 45 mm or 70 mm.

The DigiFLEX MA4000D can be used on higher-powered installations in industry and energy production. This model offers a 100 mm clamping diameter.

DigiFLEX ammeters are delivered ready-to-use in blister packs.
